NFA Visual Entry: create the NFA visually by creating and naming new nodes, connecting them with other nodes, specifying the connection letter/symbol

DFA Visual Conversion: the equivalent DFA is creating as the user specifies with the conversion tools

NFA JSON Entry:
the NFA can be created as a JSON object and will be rendered in the visual entry above

Conversion Tools: 1) step through (can specify number of steps) 2) complete conversion (can specify speed) 3) Export NFA 4) Export NFA 5) Export delta table

Delta transition table:
the transitions for the resulting DFA.
